*** 12 NEW COLORS ***

SHAKE WELL! Color appears to separate due to denser pigments settling at the bottom with thinner medium rising to the top. Shake all your colors well to remix the suspension.

Use a flow medium to thin if desired.

Add a textile medium for use on t-shirts or other fabrics.

For fine art and decoys, set the air pressure to 20-40 P.S.I. as determined by your needle and desired application.

Build up paint films slowly, allowing to dry between coats.

Apply a clear coat, such as Fusion I.A. Matte Varnish, to protect your work when cured.

Clean up with soap and water.

Updated and improved using feedback from leading wildlife and fine artists, Chroma Polyurethane Airbrush Colors represent the finest in co-polymer technology. They are waterbased, non-toxic, pre-mixed, and ready to use. Keeping the original polyurethane binder, the highly concentrated colors provide a velvet matte finish. Colors range from tones for wildlife through bright, contemporary colors, and are completely intermixable. When fully cured, they form a tough, water-resistant layer of pure color.

These paints are perfect for all applications on wood, metal, textile, paper, illustration board, wood resin, canvas and much more.

Take your art to the next level with Chroma Polyurethane Airbrush Colors.
